How to Use This Report

SoftwareReviews captures the most compelling, useful, and detailed information on software performance to help evaluate, compare, and ultimately select the best tool for your business.

Our proprietary evaluation methodology is built on decades of experience helping businesses select software. We surface key elements every prospective buyer should review and understand prior to selecting a software provider, going much deeper than features and price to provide a detailed understanding of the relationship, negotiations, and value drivers of the solution.

This report is an evaluation of senhasegura created entirely using data sourced from users of the software. Use this report to help inform your selection decision, inform your evaluation, or reinforce your choice to bring on a new software product and technology partner.

Understanding the Market

What Is Privileged Access Management

Privileged access management (PAM) is the combination of tools and technology used to secure, control and monitor access to an organization's critical information and resources. Subcategories of PAM include shared access password management, privileged session management, vendor privileged access management and application access management.

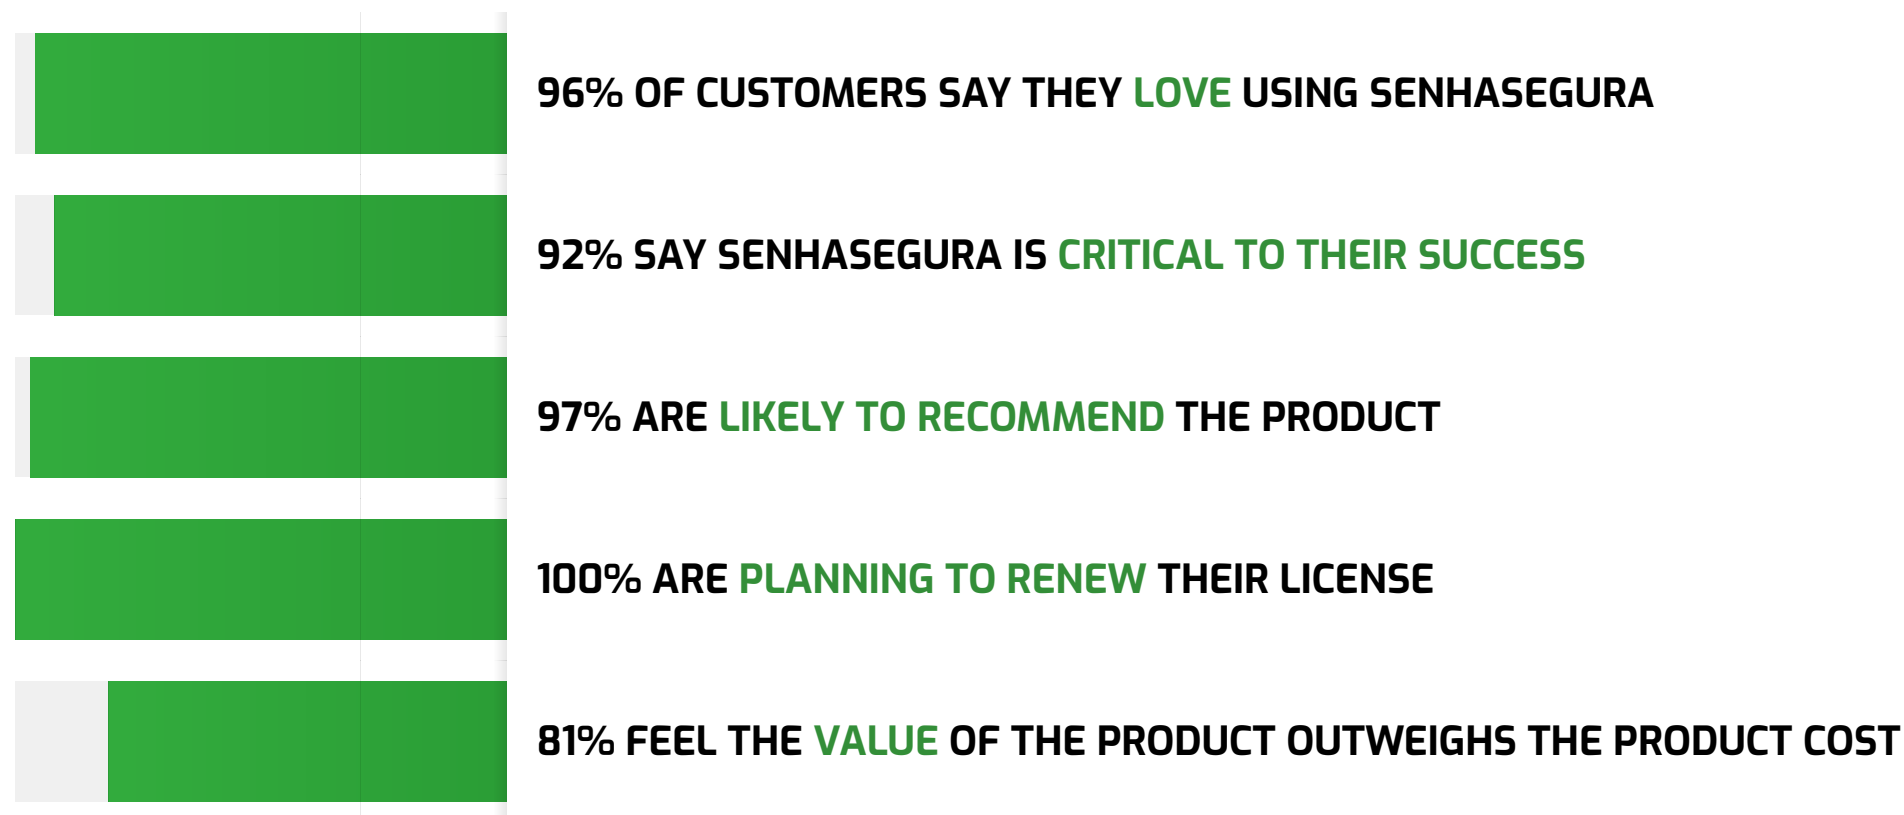

Understanding the Product

About senhasegura

senhasegura is a privileged access management software solution that stores, manages and monitors all credentials, such as passwords, SSH keys and digital certificates, in a secure digital vault.

We asked real users what they thought about using senhasegura and the value they received

Here's what they had to say:

The best software providers will have a strong product tied to immediate value

SoftwareReviews developed a list of the top 11 software capabilities any customer should look for when evaluating a software solution. These capabilities represent table-stakes expectations for any software provider and help define products that are easy to implement and operate and that drive value to the organization.

We asked senhasegura customers to help us better understand what they thought about their capabilities as a software provider. Here's a summary of what they had to say:

Business Value Created

The underlying purpose of software is to create value for employees, customers, partners, and ultimately shareholders. As a result, it is imperative that any software selection be aligned with the organization's needs and deliver enough business value to justify the cost. Users of senhasegura reported satisfaction scores of 86% when evaluating the business value provided to their organization.

Features are the gateway to driving **customer satisfaction**

Users want feature-rich software that enables them to perform a diverse series of tasks as opposed to one they find restrictive. Feature quality is just as important as quantity. Software needs to do what you're purchasing it to do, easily, intuitively, reliably, and effectively.

And finally, purchasing software can be a significant commitment, so it's important to know if your vendor is serious about the need for constant improvement and deliberate strategic direction.

senhasegura User Satisfaction Across General Features and Functionality.

Satisfaction starts with a **successful implementation**

Choosing the right software is only the first step. Successfully implementing the new solution is necessary to realize its full value and promote end-user adoption. Typically, out-of-the-box functionality isn't enough, especially for niche or industry-specific software, and the reason you're buying rather than building is to save time and money in the first place. The ability to integrate with other systems is increasingly important; without this, manual data loading and extraction can be time-consuming and prone to error.

Usability and support are drivers of ROI

End-user learning curves cost the organization money, and a tool should eliminate barriers to drive user adoption. Effective and readily available training enables users to get the most out of their software. Issues are inevitable, and vendor support will be key to reducing downtime and troubleshooting problems if they arise.

Administrative interfaces don't typically get the same attention as those built for end users, but they shouldn't be clunky or unintuitive to support management of the tool.

Compare satisfaction across top features needed to **meet your goals**

SoftwareReviews collected this satisfaction data from real customers who have used senhasegura. Here's how they rated core features:

Product Feature Satisfaction

Identify your best partner using the Emotional Footprint

Satisfaction with your software vendor is more than strong features at a good price. Your relationship with your vendor will have a significant impact on both your short- and long-term satisfaction with the platform.

The Emotional Footprint aims to quantify the value of the relationship by measuring aspects of the provider not typically quantified by RFPs and POCs: which vendors are most reliable, which are trustworthy, and which continue to innovate. Research shows these aspects are more important to satisfaction than cost or functionality.

Within the Emotional Footprint review, we aggregate customer ratings across 25 elements in the areas of Vendor Strategy and Innovation, Service Experience, Product Experience, Negotiation, and Conflict Resolution. This creates a detailed indicator of overall user sentiment toward the vendor and its product.

How We Measure Emotions

The Emotional Footprint is determined using a standard Net Promoter methodology (see right). To assess the Emotional Footprint score of senhasegura, users were asked to evaluate 25 individual emotional sentiments directly correlated to five Emotional Footprint areas.

The Net Emotional Footprint Score calculates the difference between the percentage of active promoters of senhasegura and the percentage delivering negative responses.

Emotional Spectrum Scale

$$\% \text{ POSITIVE} - \% \text{ NEGATIVE} = \text{NET EMOTIONAL FOOTPRINT}$$

Users Gave senhasegura an Overall Net Emotional Footprint Score of

+93

The Emotional Footprint assesses five key areas to evaluate the vendor relationship

1

Strategy and Innovation

Your organization and market are constantly changing, and your software partners need to change with them. Relationships are built on your software partner's ability not only to react but also to proactively innovate against your needs.

2

Service Experience

Software is no longer just about a tool; it is also about the people who support it. Many people will interact with the software provider, and these interactions will play a key role in building a long-term partnership.

3

Product Experience

When you purchase a product, you are sold on its ability to improve your capabilities, improve processes, and be reliable. An important part of creating an emotional connection is its ability to keep these product promises.

4

Negotiation and Contract Experience

During a sales experience, your first true look into your software partner is during the negotiation and contracting phase. This helps establish the baseline of the nature of the organization you'll be working with.

5

Conflict Resolution

It's inevitable that in the course of your partnership, conflicts and issues will arise. In the face of challenges, will your software provider jump in the foxhole to help solve your problem or leave you to it?

senhasegura **Word Cloud**

The SoftwareReviews Word Cloud aggregates the most commonly experienced sentiments held by senhasegura users based on the data collected within the Emotional Footprint. At a glance, it helps evaluate the vendor-client relationship and product effectiveness. Word size is driven by the strength of the sentiment. Word color is driven by the number of reviews that share the sentiment.

Additional data about each of the emotional sentiments can be found on the following pages.

senhasegura Strategy and Innovation Experience

Your software provider's attitude toward innovation is important; if they aren't at least keeping pace with market directions and trends, they certainly won't be enabling you to get ahead. Use the data in this section to determine whether users felt senhasegura appreciates the need to innovate.

Average Score

+95

senhasegura Service Experience

Good service matters. The last thing you need is to be disrespected by your software provider or to get bogged down by their ineptitude or neglect. This section displays data related to quality and effectiveness of service, so you can know whether you'll be treated well before and after you've made the purchase. Use this data to determine how users reported their service experience with senhasegura USA LLC.

Average Score

+90

senhasegura Product Experience

Software needs to reliably enable your performance and productivity. This can be the difference between a product propelling your organization forward or being dead weight that you'll need to carry. Use this to data to determine how users reported their product experience with senhasegura USA LLC.

Average Score

+96

senhasegura

Negotiation and Contract Experience

Negotiation doesn't have to be adversarial. Both parties are always looking to get the best deal, but finding a vendor who will work with – rather than against – you makes it more likely you'll both be happy with the results. Use the data in this section to determine how users reported their negotiation and contract experience with senhasegura USA LLC.

Average Score

+94

senhasegura Conflict Resolution Experience

Disagreements are inevitable, but knowing your software provider will handle them reasonably, fairly, and amiably can give you peace of mind. Use the data in this section to understand how users of senhasegura felt when conflict arose and how senhasegura USA LLC acted in response.

Why Users Recommend senhasegura

SoftwareReviews asks users why they recommend the platform. Here are direct quotes from users of senhasegura.

"Will up your org security level with privileged access management, control and auditing mostly if you have a complexity supply chain who needs to access your environment."

Pedro B

IT Development, Integration, and Administration
Information Technology

"Make a POC to see all the features, in your environment."

Maikon K

IT Development, Integration, and Administration
Information Technology

"It would be nice to have a good technician leading the implementation, it is a complex and rewarding process."

Bruno B

IT Development, Integration, and Administration
Consultant

Why Users Recommend senhasegura

"Assess Needs: Evaluate specific security requirements, considering your organization's size, critical systems, and compliance standards. Pilot Test: Conduct a controlled pilot test before full deployment to assess performance and usability. training: Provide training to ensure your team understands and follows security best practices. Integration: Check how Senhasegura integrates with existing solutions for efficient security operations. Compliance: Ensure Senhasegura meets applicable regulatory compliance, like GDPR or HIPAA. Support: Evaluate the quality of technical support for effective issue resolution. "

Chanderson O

About the **Data**

SoftwareReviews collects in-depth quantitative and qualitative feedback data directly from verified end users about their experience with top enterprise software providers. Its proprietary online survey platform gathers more than 130 data points on each product, allowing end users to thoroughly evaluate their experiences using the software, from selection through purchase and service.

Every review is meticulously checked through a robust quality assurance process to ensure it is submitted by a real person with valid credentials for using the software. End-user experience and sentiment measures revealing product feature fit, perceived capabilities, business value drivers, and the quality of the provider relationship are accessible at both a high-level roll-up and a more detailed drill-down.
